

Setting a course for more sustainable shipping

Description

The shipping industry is used to dealing with constant change, from shifting socio-economic conditions to extreme weather. But now it faces its biggest challenge yet: becoming more sustainable. Maritime transport is already responsible for approximately 2.5 percent of greenhouse gas emissions (GHG) – and to avoid this increasing even further, the industry must take drastic steps to transform its operations. Shipping companies are already turning to cleaner fuel types or installing new equipment.
