

Solar meets more than 100 per cent of local demand in South Australia again

Description

Solar power has again delivered more than 100 per cent of local demand in South Australia, in what is expected to become an increasingly regular occurrence. The combination of rooftop solar (1275MW, or 80.9 per cent of local demand) and large scale solar (331MW, or 21 per cent) delivered a combined 101.9 per cent of local state demand for a 5-minute period. At the time there was a little bit of wind generating (just 22.2MW), and about 275MW of gas generation. The state's three big batteries were charging (72MW) and a total of 326MW was being exported to Victoria. And while the 100 per cent level was reached for just one five minute period, from 1030 to 1530 – a period of five hours – solar

contributed more than 90 per cent of state demand.
