

Stadler Designs and Builds new GAIA and IREN Sorting Plants in Asti and Parma – GLOBAL RECYCLING

Description

As the 2030 Agenda targets loom, environmental service companies are increasingly incorporating in their business plans investments in recycling facilities capable of bringing us closer to the zero waste goal by turning it into secondary raw materials that can be returned to the commercial cycle with

minimal waste. With this aim, G.A.I.A. Spa and Iren Ambiente (which holds 45% ownership of G.A.I.A. and provides environmental services to a population of more than 3 million) called on STADLER, the German company specialized in the planning, production and assembly of turnkey recycling and sorting plants, to design and build new recycling plants in Asti and Parma. The requirements for the two plants were different: sorting of plastic packaging from separate collection in Asti, and sorting of plastic and paper/cardboard in Parma.
