

## Sustainability in Cloud Providers

### Description

In this Research Note, we look at the sustainability and carbon footprint of leading cloud providers to help provide enterprises with the insight they need to make the server decisions that are right for their business. One of the most straightforward ways an enterprise can reduce its carbon footprint is to make use of cloud servers. Larger, centralized operations are often more efficient and, recently, have been prioritizing the lowering of carbon emissions. In determining which cloud provider is the right choice, an enterprise will consider numerous variables, including sustainability. Looking at the track records, future goals, and current actions that providers are taking in climate and sustainability can help an enterprise make the right choice.
