

## Sustainability is Space's Newest Frontier | Jewish & Israel News

### Description

Israeli Space Week, held over the past week, brought together private and public entities who discussed the booming industry at the Ramon Space Conference, sponsored by the Ramon Foundation and the Israel Space Agency, with this year's theme focusing on searching for sustainable solutions to resolve climate change. Dual-usage technologies may help curb greenhouse emissions, ensure food security, predict weather patterns, and help protect the environment, while allowing the commercial sector to flourish. According to research by Morgan Stanley, the global space industry could generate revenue of over \$1 trillion or more by 2040, up from \$350 billion.
