

Sustainable prefab beach house in Blairgowrie – Sustainable Architecture with Warmth & Texture | Designhunter

Description

This lovely little beach house was created by the talented folk at [Archiblox](#). Located in the seaside village of Blairgowrie, the house is a sustainable pre-fab designed around 3 modules that are clad

externally with corrugated colorbond and internally with floor to ceiling plywood. The house features custom-made joinery throughout which was also made by Archiblox. The house was designed in the shape of the letter H, with north-south orientation which gives the home an abundance of natural light and warmth. All this was built in 22 weeks off-site and just 3 weeks on-site using as many sustainable features as possible.
