

## The Energy Transition: Sustainable Marine Powertrains And Alternative Fuels

### Description

For several years at METSTRADE, we have been asking our Sustainability Panels the question: “How

green is green in the leisure marine industry?” The topics we have covered have included disassembly, life cycle assessment, material selection for better recyclability at end-of-life, and the development of clean energy storage and propulsion solutions. For the 2021 sustainable panel at METSTRADE, we considered the intensifying global pressures on achieving net-zero emissions by 2050. For instance, the climate change targets set out by the UN Sustainability Development Goals, and the EU Green Deal. With this in mind, we decided to narrow the focus, by homing-in on the latest innovations aimed at achieving these climate change targets.
