

The net-zero transition: Its cost and benefits | Sustainability

Description

default watermark

Governments and companies worldwide are pledging to achieve net-zero emissions of greenhouse gases. What would it take to fulfill that ambition? In a new report, we look at the economic transformation that a transition to net-zero emissions would entail—a transformation that would affect all countries and all sectors of the economy, either directly or indirectly. We estimate the changes in demand, capital spending, costs, and jobs, to 2050, for sectors that produce about 85 percent of overall emissions and assess economic shifts for 69 countries. Each of the six articles highlighted on this page provides a detailed look at aspects of the net-zero transition. The full report, *The net-zero transition: What it would cost, what it could bring*, as well as a PDF summary, can be downloaded for
