

Twinings Sustainability and the Environment

Description

At Twinings, we're concerned about the use of plastics and are taking action to improve the sustainability of our products and reduce their impact on the environment. Across Twinings products in the UK, more than 90% of our current packaging materials are recyclable, and we are working hard to improve the remaining non-recyclable materials. We support the principle of Remove, Reduce, Recycle and Reuse and believe that, whilst there is currently an important role for some types of plastic to help package and protect our teas, we should ensure we are using the right packaging materials, in the right way, as part of a 'circular' economy.
